The Mining Equipment Prospector

A New Concept in Scaling

Breaker Technology, Inc. (BTI) will introduce the innovative VP245 and VP285 Vibratory Pick scaling devices at MINExpo 2004, Las Vegas • Booth 7213.

This patent pending technology has integrated a hybrid hydraulic breaker within a scaling pick. The new concept in scaling combines the features and benefits of both a conventional pick and a hydraulic breaker.

Its streamlined design provides excellent visibility to the tool in all scaling modes. The robust design allows the transfer of full boom pry forces of the carrier to the scaling surface and gives complete protection to the breaker. The VP Series of scaling pick doesn't mine the rock, but breaks the loose free, avoiding damage to the carrier thereby extending the life of the equipment.

BTI designs, manufactures and markets hydraulic rock breaker systems for mining, quarrying and recycling industries in addition to a complete line of mobile mining equipment. The company also markets a complete line of hydraulic and mechanical attachments including hydraulic breakers to the construction and demolition industry through an extensive dealer network. BTI has three locations in North America to support this network, Thornbury, ON Canada; Solon, OH and Riverside, CA.
